

Q: Can Megaspore heal leaky gut?

A: Yep. Our research and studies have shown that it takes as little as ONE MONTH to entirely seal the leaky gut. This is the ONLY probiotic on the market that has proven this kind of results. 80% + of us suffer from the symptoms and diseases that arise from this condition, so this is the KEY gateway to healing and reversing disease.

Q: How can I SAVE MONEY on Megaspore?

A: Well first, the obvious...when your gut is happy, it self produces vitamins and minerals you may be spending more money on now, since you have to depend on them from the outside without the right bacteria working for you in the colon. But here are the other 2:

1. Buy 2 at a time. You'll save \$5 on shipping PLUS you'll be guaranteed to have the next bottle waiting for you. We run out often and we're commonly on backorder so I HIGHLY recommend always ordering 2 and placing another order for 2 when your second bottle is halfway through. People love the benefits Megaspore yields so much they grow depending on it, so they'll do anything to get their hands on one when they run out. And it's also hard to find especially for the price we offer :)
2. Buy it as part of a KIT. We have 2 focused, goal specific kits offering Megaspore as the star:
 - a. [The Women's Love my Hormones kit](#)
 - b. [The Love my Immune System kit](#)
3. Subscribe and SAVE option - COMING SOON!

Q: How should I dose Megaspore to protect my gut and re-inoculate the GOOD bacteria while on antibiotics or antifungals?

A: Take 2 capsules with or just after a meal, 2 hours or more away from your prescriptions for a minimum of 5 days prior to vaccinations and continue for 3 weeks following each inoculation.

Q: Can Megaspore be safely taken when breast-feeding or pregnant?

A: Yes, we have a number of patients and individuals who are taking the product during pregnancy and nursing. If the pregnant or nursing mother has strong inflammatory conditions or yeast issues, they should also be titrated up so there isn't a detox reaction.

Q: What Conditions are specific for MegaSporeBiotic?

A: Clinically, we have benefitted the following conditions and other doctors have reported major benefits in these listed conditions as well:

- Crohn's, IBS, IBD and colitis
- Minor and major gastro discomfort – gas, bloating, indigestion
- Acid reflux/GERD
- Hashimoto's disease
- Cystic acne
- Rheumatoid arthritis
- Allergies, asthma, eczema, psoriasis

Q: Can pets (cats & dogs) be supplemented with MegaSporeBiotic?

A: Yes, the strains are universal probiotics and are used in all types of animals and livestock throughout the world, including marine life. Take one capsule, pull it apart and sprinkle it on their food.

Q: Will the spores still work if you pull the pill apart and still take it?

A: Absolutely. This is the preferred way to administer to children. It can be pulled apart and the powder mixed into nearly any food or drink. It is temperature stable, so it can even be mixed into hot tea, coffee or soup. There is no real taste impact of the powder.

Q: Why is MegaSporeBiotic different from other probiotics already on the market?

A: MegaSporeBiotic is the only product with 5 pharmaceutical grade bacillus spore strains. In addition, MegaSporeBiotic is the first probiotic to introduce a strain that produces key nutrients in the digestive system. In this case, the nutrients produced are powerful carotenoid antioxidants. Carotenoids are the beneficial antioxidants found in colored fruits and vegetables. Carotenoids from dietary supplements however are poorly absorbed and most people do not eat as many colored fruits and vegetables as they should, thus supplementation with a carotenoid rich probiotic is highly important. These beneficial bacteria produce high levels of carotenoids right at the sight of absorption, thus allowing for optimum uptake into the body. MegaSporeBiotic is the first and only probiotic with such a feature.

Q: I am currently taking a probiotic and it seems to be working just fine. Why should I switch to MegaSporeBiotic?

A: MegaSporeBiotic offers functions that other common probiotics do not. Effective probiotics go beyond digestive health. Effective probiotics are critical for immune function, immune stimulation, managing populations of dangerous bacteria, digestion of cholesterol, neutralizing toxins, production of key nutrients, etc. Unless your current probiotic contains high doses of several spore strains, it is not providing all these beneficial affects. Use MegaSporeBiotic to take complete advantage of all the functions of a true probiotic.

Q: What are the side effects of taking a probiotic/MegaSporeBiotic?

A: None have been reported for MegaSporeBiotic. However, some individuals can experience some digestive discomfort initially due to changes in gut bacteria. Individuals with SIBO, Candida, and major digestive issues are highly advised to consult with a health practitioner for education on proper dose protocol. This may include starting at a 1/4- 1/2 capsule dose every other day and slowly titrating up to a full dose of 2 capsules over a long period of time.
